

### Concept & Creation of Eagle Fabrication by Sheet metal.

An eagle is a powerful, large bird of prey known for its sharp eyesight, strength, and majestic flight. Belonging to the family *Accipitridae*, eagles are apex predators, sitting at the top of the food chain in their respective habitats. There are over 60 species of eagle found across every continent.

Eagles have one of the sharpest sights in the animal kingdom, estimated to be four to eight times better than a human. Their large, curved talons are used to seize and carry off prey, while their strong, hooked beak is designed for tearing flesh. They use powerful wing beats and glide on air currents and thermals to conserve energy, with diving speeds that can reach over 150 miles per hour.

Many tribes view eagles as sacred messengers between humans and the Creator, and their feathers are highly revered.

Scaling the size of the wonderful creature had the challenging phase, it was very tough to create a bold look of the eagle and his attitude on body. however, our team was managed to bring it to reality.

Below is the Pic at Welding Stage.
